Prompting for People Who Already Think

Using AI without adopting its voice.

A FIELD GUIDE FOR PEOPLE WITH A VOICE TO PROTECT

01 The condition

Ask a tool to write something and it answers in its own voice: smooth, agreeable, slightly hollow. For people whose voice is part of the work, that is a real cost. The result is usable and somehow not yours.

Most of the fix is not cleverer wording. It is context. A tool given no sense of who you are will average you out. Given a little of your own writing, a few words you never use, and one clear job, it returns something much closer to you.

02 How to use this sample

Fill in the four parts on the next page for one real piece of writing you need this week. Paste them, in order, as a single prompt. Then run the read-aloud check before you use a word of what comes back.

03 The four-part brief

1 · Context: who this is for, and where it will live

2 · Your voice: three lines you wrote yourself, plus words you never use

3 · The job: one task, stated plainly

4 · Constraints: length, what to leave out, what not to add

> THE READ-ALOUD CHECK
>
> Read the result aloud. Any sentence you wouldn’t say, rewrite yourself. Don’t ask the tool to fix it; that is how its voice gets back in.

THE FULL FIELD GUIDE

This is a two-page sample of *Prompting for People Who Already Think*, a 20-page field guide. The full version also holds:

— Context-setting and tone anchoring, in detail
— Refusal patterns: telling a tool what not to do
— Prompt structures for brand, strategy and long-form work
